

HOW TO...

PREPARE FOR AN EVOLT SCAN

It's important to always scan under the same conditions every time. This will help ensure that your scans always produce the best, most consistent data.

INSTRUCTIONS

- Scan at the same time of the day each time you scan.
- Keep your hydration and food volume the same as your previous scans.
- Preferably do not scan after training.
- Ensure you are well hydrated.
- Do not consume alcoholic beverages within 24-48 hours prior to your scan.
- Ideally do not consume caffeine, pre-workouts or thermogenics (fat burners) before you scan.
- Ensure you are rested and calm (for example, if you have rushed to get to your scan, give yourself enough time to allow your blood pressure to return to normal).
- If you are female, take note of where you are in your menstrual cycle for reading consistency.
- Check that your feet cover the silver pads of the Evolt 360 machine.
- Make sure you have contact with your fingers, palms and thumbs on the silver pads on the handles of the Evolt 360 machine.
