It's all linked to the gut

Find out what kind of dietary choices can lead to gastrointestinal disorders among other health issues

Food (poison)

Health experts warn that eating a diet high in processed foods, particularly those containing added sugars and fats, can lead to a variety of health problems, including obesity, heart disease, and type 2 diabetes. They also note that a diet high in fiber, fruits, and vegetables can help prevent these issues.

Course correction

Experts suggest that making small changes to your diet, such as increasing your intake of fiber and healthy fats, can help improve your gut health and overall well-being.

Health impact

A healthy gut is essential for a strong immune system and overall health. A diet that supports a healthy gut can help reduce the risk of various chronic diseases.

Resistance

Many people struggle to make lasting changes to their diet. Experts recommend starting with small, manageable changes and seeking support from a healthcare professional or a dietitian.

NATIONAL NUTRITION WEEK

September 1-7, 2023

The Effects of a Low Carbohydrate Diet on Metabolic Changes and its Effect on Aging (Part 1)

Although the human lifespan has increased over the past century, the quality of life has not improved proportionally. This is due to a variety of factors, including changes in diet and lifestyle. A low carbohydrate diet has been shown to have several metabolic benefits, including improved insulin sensitivity and reduced inflammation. These benefits may help to slow down the aging process and improve overall health.

Low Carbohydrate Diet

A low carbohydrate diet typically restricts the intake of carbohydrates to less than 100 grams per day. This can lead to a variety of metabolic changes, including a decrease in blood sugar levels and an increase in ketone production. These changes can have both positive and negative effects on health, depending on the individual and the specific diet.

Metabolic Changes

Metabolic changes refer to the alterations in the body's chemical processes. A low carbohydrate diet can lead to a state of ketosis, where the body burns fat for energy instead of carbohydrates. This can lead to weight loss and improved metabolic health, but it can also lead to nutrient deficiencies if not properly managed.

Effect on Aging

Aging is a natural process that involves a decline in physical and cognitive function. A low carbohydrate diet may help to slow down this process by reducing inflammation and improving metabolic health. However, more research is needed to fully understand the long-term effects of this diet on aging.

How much protein is TOO MUCH?

Find out just how much protein you need and how you can easily hit the required levels in your daily diet.

You think you need to have a cup of protein supplements to achieve results. The not-so-obvious — is it what you eat that is the key. In most cases, this is incorrect. It's a major mistake that your body can't repair the cells in your

protein do you

People need between 10 and 35 grams of protein per day to maintain a healthy weight. If you're not getting enough protein, you may experience muscle loss, fatigue, and other health issues.

What happens to the excess protein?

Any excess protein you eat is converted to fat and stored in your body. This is why, in most cases, taking additional protein supplements is not needed, and in some cases, it can lead to weight gain and other health problems.

To help prevent some cancers, such as upper digestive tract and kidney cancer, an upper

REVIEWING A CHECK-IN

A woman with brown hair tied back, wearing a blue tank top, is shown from the chest up, looking off to the side. She is in a gym, with various pieces of equipment and bright lights visible in the background. A semi-transparent purple box with rounded corners is overlaid on the bottom half of the image, containing text.

What went well?

“Tracked everyday! Love being able to use the barcode scanner. Feel like I'm drinking plenty of water throughout the day using my Stanley.”

What was challenging?

“Afternoon workouts are tough – I just felt so tired! Some days I skip lunch or just eat a snack at my desk. I try to make up by eating a bigger dinner.”

On a scale of 1-10, how confident do you feel? “8 – I'm committed!”

What is the #1 action you will take? “Schedule my training sessions with you for the next month. Never skip a Monday!”

Is there anything else you would like to share? “I'm not sure how to track a food that is made by someone else. Sharon brought in cupcakes to work... again.”

Coach's Notes

Hi Sarah!

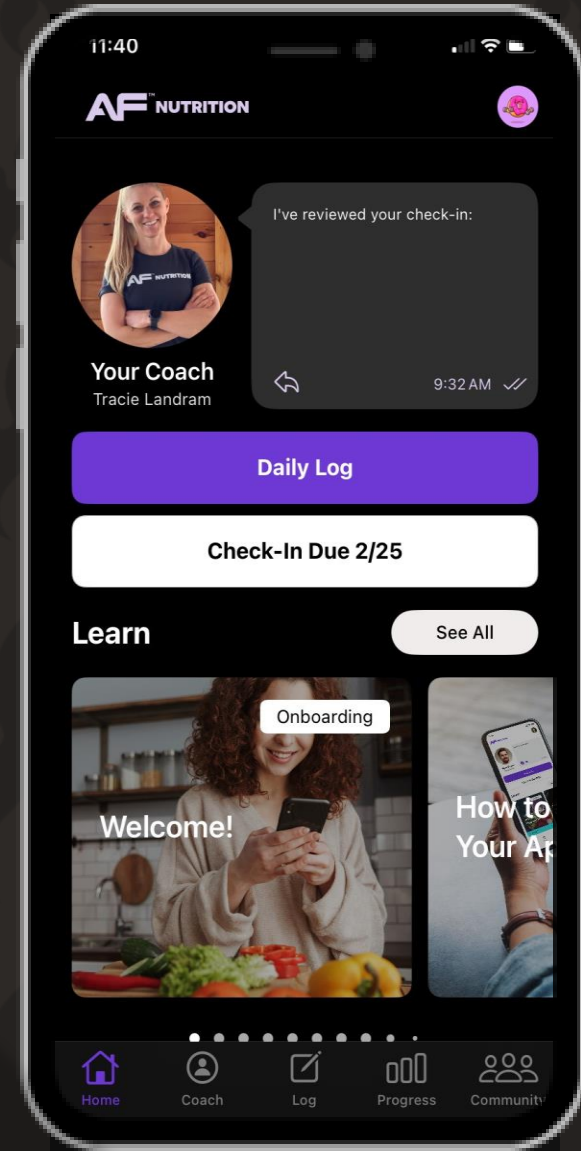

Thank you for checking in! I've reviewed all your data and you did a great job!

Let's look at how things went with your two action goals:

--Protein at breakfast (30g): How did this feel for you? Were you able to hit that target most days? I'd love to hear if you noticed any changes in energy, focus, or appetite through the morning or the rest of the day.

--Pre-workout snack in the car: Were you able to pack and eat that snack before the gym? I'm curious if your workouts felt

MONDAY	TUESDAY	WEDNESDAY	THURSDAY	FRIDAY	SATURDAY
Client Submits Check-In	5 CHECK-INS REVIEWED	Client Submits Check-In	5 CHECK-INS REVIEWED		

SET EXPECTATIONS

1 ADD availability to your coach bio

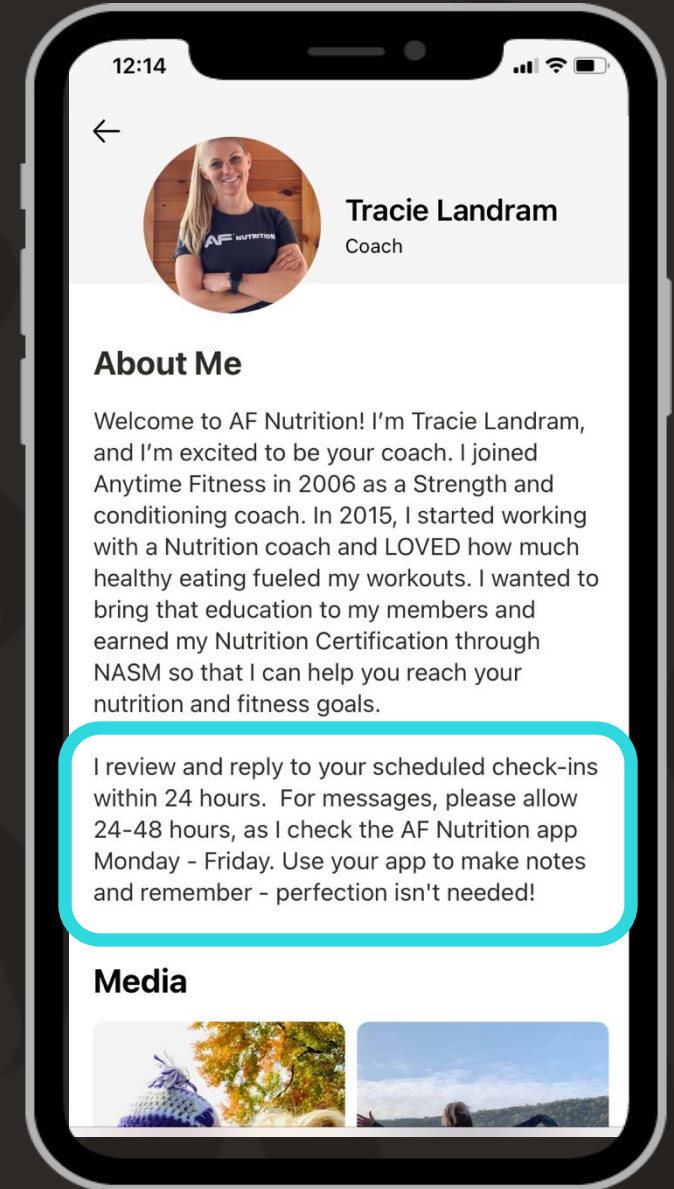

MANAGING YOUR TIME

SET EXPECTATIONS

1 **ADD** availability to your coach bio

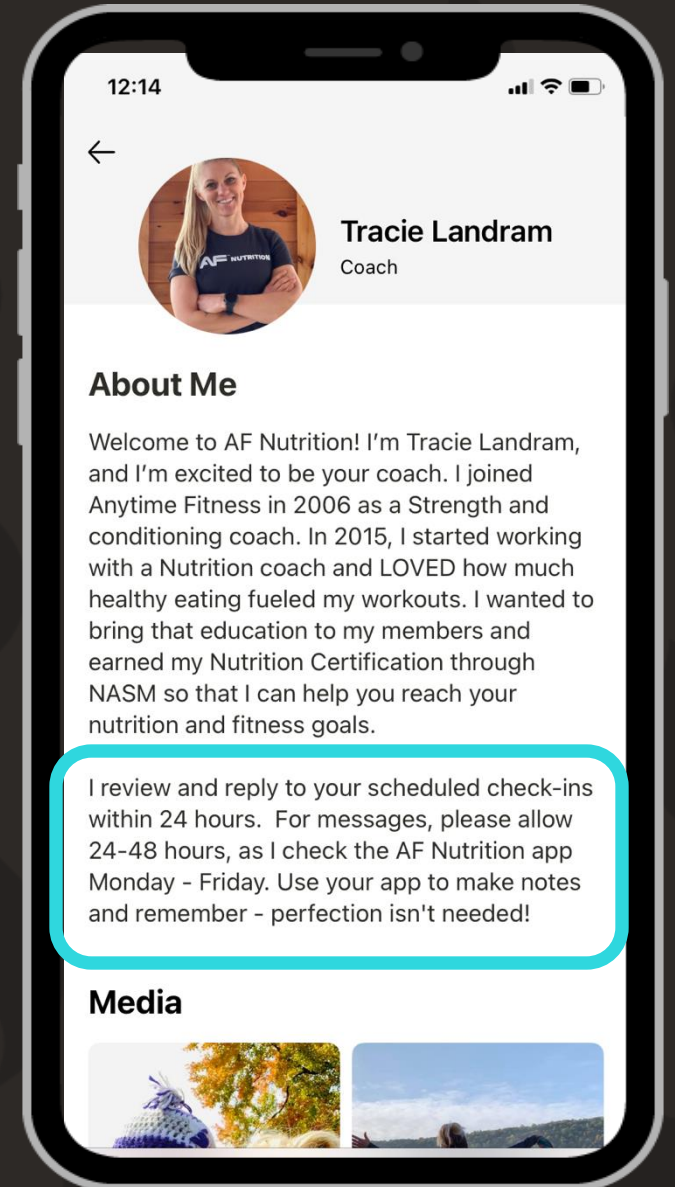

I review and reply to your scheduled check-ins within 24 hours. For messages, please allow 24-48 hours, as I check the AF Nutrition app Monday - Friday. Use your app to make notes and remember - perfection isn't needed!

SET EXPECTATIONS

- 1 **ADD** availability to your coach bio
- 2 **FRAME** check-ins as appointments
- 3 **COMPLETE** missed check-ins

MANAGING YOUR TIME

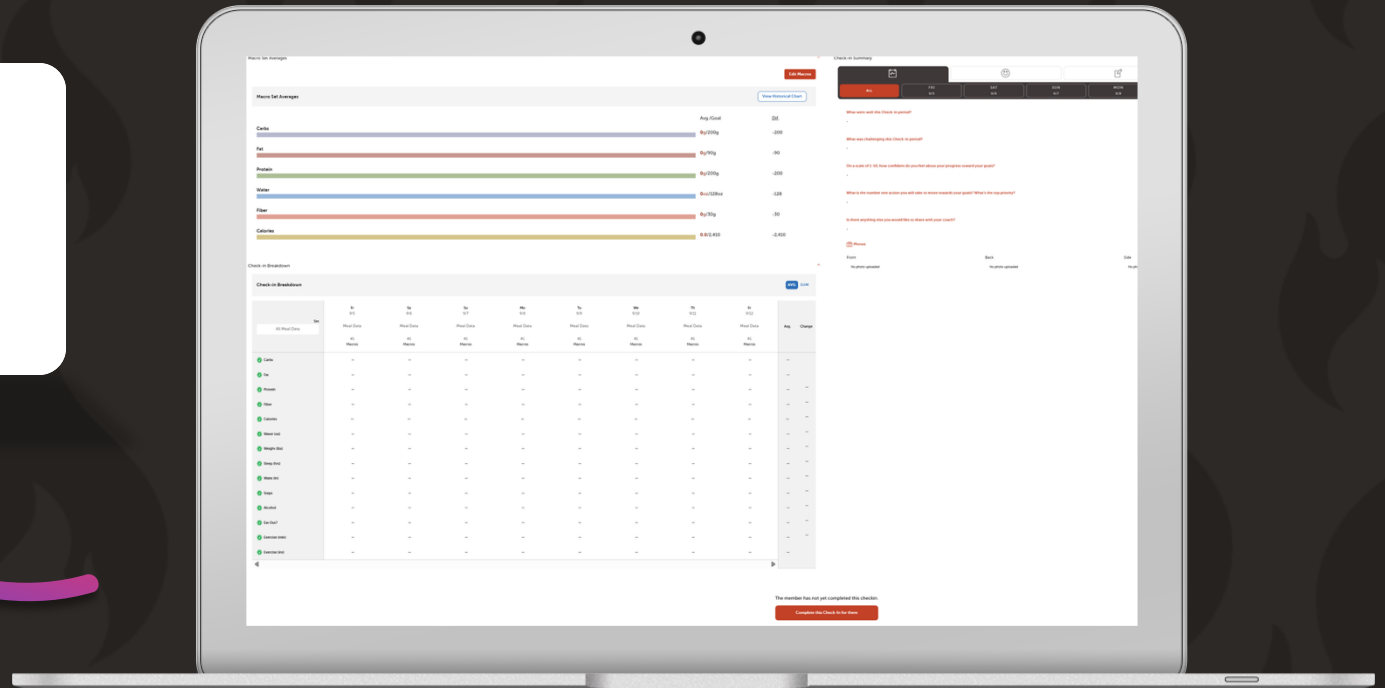

SET EXPECTATIONS

3 COMPLETE missed check-ins

The member has not yet completed this checkin.

Complete this Check-In for them

MANAGING YOUR TIME
