

Idaho & Alaska Law Enforcement & Corrections Officers Physical Ability Test Proctor Script

(This test is only applicable to agencies subscribing to PST testing services)

Candidates for the positions in law enforcement and/or corrections for Idaho or Alaska agencies must successfully complete the following Physical Ability Test. Additional information about the event point structures, including scales, is available at www.publicsafetytesting.com/information-center/test-requirements.

There is a maximum of 100 points possible for the 5 events listed. A minimum of 10 and maximum of 20 points are possible for each event. There are no retests for any of the events, and you must pass every event to pass the overall test.

300 METER RUN:

The 300-meter run measures your anaerobic capacity. You must complete the run without any help. You may not touch the treadmill while the event is in progress except for adjusting your speed. You will start by standing on the treadmill. The proctor will push the start button and adjust your speed to 9.0 MPH, which is the minimum amount required to pass the 300-meter sprint in 71.0 seconds. When the treadmill display reads 9.0 MPH, the proctor will start the clock. You may adjust your speed during the event but slowing below 9.0 MPH may make it difficult to meet the standard.

You will run 0.19 miles, which is equivalent to 300 meters. Your goal is to run the distance as quickly as possible. We will record your finish time when the distance has passed. Note that distance will have elapsed during the time it takes to set the treadmill to 9.0 MPH. This distance will not count toward your total race distance but will be added to the final distance (example: treadmill display reaches 9.0 MPH at 0.02 miles; the clock starts at 0.02 miles. Race is 0.19 miles = clock is stopped at 0.21 miles). Stopping the treadmill before the proctor confirms the distance may result in you not passing the event. Once the proctor has let you know that the clock has stopped, you may stop the treadmill however you wish. Are there any questions?

Candidates should receive a 15-minute break after this event, before starting the next event

VERTICAL JUMP:

The vertical jump measures leg power. After you warm up, stand with one side to the wall. With your heels together, reach upward as high as possible with your hand against the wall. Place a piece of painter's tape on the wall. Your maximum standing reach will be recorded by placing a piece of painter's tape at the top of your reach. Then, using a rocking, one-step approach, jump as high as possible while extending the arm nearest the wall and place a piece of painter's tape at the top of your jump. You may also jump off both feet without taking a step if preferred. Your maximum jumping reach will be recorded.

Your score will be recorded as the difference between your standing reach and your jumping reach. You will have three tries at this event, with your best effort counting as your score. Are there any questions?

Candidates should receive a 3-minute break after this event, before starting the next event

MAXIMUM PUSH-UPS:

This test measures the muscular strength/endurance of the upper body muscles in the shoulders, chest, and back of the upper arms (the triceps).

Place your hands on the ground so they are in a vertical line with your shoulders, approximately 1 - 1.5 shoulder widths apart. Your feet may be together, or up to 12 inches apart. Your body must be in a straight line from the shoulders to the ankles and must remain that way throughout the exercise. Keep your head up and spine in alignment. Lower your body by bending your elbows until your upper arms are parallel to the ground until you touch and slightly compress the 4-inch foam block held under your chest.

Return to the starting position by completely straightening your arms. You may only rest in the up position. If any part of your body other than your hands and feet touch the ground during the test, your test is over. If you fail to: keep your body in a straight line, touch your chest to the foam block, or lock your elbows in the up position, you will receive a warning. After one warning, incorrect repetitions will not count. There is no time limit.

Do as many correct push-ups as possible. Your score is the number of correct repetitions. Are there any questions?

Candidates should receive a 10-minute break after this event, before starting the next event

ONE-MINUTE SIT-UP:

This test measures the muscular strength/endurance of the abdominal muscles.

Lie on your back with your knees bent at 90 degrees or tighter with your heels on the edge of the mat. Your feet may be together or apart, but the heels must stay in contact with the floor. Your partner will sit on your feet and wrap their arms around your calf muscle area or you may use a sit-up holder or place your feet under an object to hold them in place. It is your responsibility to inform your partner of any adjustments that need to be made before starting the test in order to assure your comfort. Your fingers must stay interlocked behind your head throughout the event. If your little fingers are not touching, that is considered "apart" and such performance will not be counted. Lift your body by bending at the waist. Touch your elbows to your knees and return to the starting position. When returning to the starting position, your fingers must touch the mat behind your head.

You may rest only in the up position and your fingers must remain interlocked the entire time. Do not arch your back or lift your buttocks from the mat. If you fail to: keep your fingers interlocked, touch your elbows to your knees or your fingers to the proctor's hand, or lift your buttocks off the mat, you will receive one warning. After one warning, incorrect repetitions will not count.

You will have one minute to do as many sit-ups as possible. Your score is the total number of correct sit-ups. Are there any questions?

Candidates should receive a 5-minute break after this event, before starting the next event

1.5 MILE RUN/WALK:

This test is a measure of cardio-respiratory endurance (or aerobic capacity).

You must complete the 1.5-mile course without any help. Your goal is to finish in as fast a time as possible. Try not to start too fast but maintain a pace you can sustain for about 10 to 15 minutes. You may walk, but walking will make it difficult to meet the minimum passing time. You must complete the run without any help. You may not touch the treadmill while the event is in progress except for adjusting your speed and your incline should remain at zero. You will start by standing on the treadmill. When your proctor says "Go," you will push start on the treadmill.

You will run until the treadmill distance reads "1.5 miles," at which time the proctor will record your time. Are there any questions?
