

Door Strike Prerequisites

To ensure a smooth access control installation for each recovery room, clubs must complete the following prior to the install visit:

1. Door Strike & Power Supply:

The electric door strike must be installed and connected to a functioning power supply.

2. AC Cabling:

AC cabling should be run to the recovery room door in advance.

3. Power Connection:

The door strike must be properly hooked up to the power supply.

Day of Installation:

ProV technician will integrate our Access Control system into the existing electric lock circuit.

⚠ Important:

Failure to have the electric strike and power supply installed and powered prior to the visit may result in a revisit fee.
